About

- Passionate Full-stack Developer specializing in MERN Stack, eager to learn and grow in career. Continuously upgrading myself by taking up challenging projects and courses.

Experience

- **Matrical Technologies**

February 2024 -

Full Stack Developer

As a Full-stack Developer specializing in web development with MERN Stack, my core responsibilities encompass requirement gathering from customers, understanding business pain points, proposing technical solutions, developing applications, testing, and documentation.

- Designed the Billing page (frontend and backend) for a Hospital Management System.
- Proactively optimized the backend code and middleware for Appointments, Patient Profile, Dashboard pages in the Hospital Management System to enhance performance and code maintainability.

Skills

- HTML/CSS/JAVASCRIPT
- MERN Stack
- Next.js
- Typescript
- TailwindCSS
- Redux
- RESTful Apis
- Framer Animation

Projects

- **AI SaaS Text-to-Image Generator**

A Text-to-Image Generator App powered by AI, allowing users to create images from text prompts. The app features an integrated credit system, where users can generate images based on their available credits. Users can purchase additional credits through an online payment gateway Razorpay. The platform also includes secure user authentication with JWT (JSON Web Token) for safe login and user management.

- **Personal Portfolio**

This is a minimalistic personal portfolio website built with Next.js and Typescript and styled using Tailwind CSS. The website is fully responsive. The site uses Next.js for server-side rendering, ensuring fast load times and excellent SEO performance. Tailwind CSS provides a flexible and efficient way to style the portfolio, allowing for a clean and modern design that works across different screen sizes.

Education

- **Indira Gandhi National Open University**

Bachelor of Arts

2023
